## uRage "Reaper 800 8K" Gaming Mouse

### For fast shooters

uRage introduces the Reaper 800 8K, its first mouse with an 8,000 Hz polling rate. This reduces the response time to 0.125 ms,

which is important for lovers of fast shooters, as it makes input

recognition faster and cursor movements smoother. The

symmetrical mouse, which is equally suitable for right-handed and left-handed users, has a native

resolution of up to 26,000 dpi thanks to the PAW3395 sensor. The 79-gram lightweight rodent scores points with its durable mouse gliders made of pure PTFE and the detachable and flexible two metre uFlex cable. The practical and programmable four-way scroll wheel enables more extensive use than with conventional mice, while a further eight buttons can be programmed via the gaming software for greater customisation. Lighting, lift-off distance and profiles are saved in the on-board memory and are therefore ready for use at any time.
